(54) ANTENNA DEVICE FOR PORTABLE TERMINAL

(57)Abstract:

PROBLEM TO BE SOLVED: To solve the problem that it is necessary to arrange an RF circuit at an upper case body, and that it is difficult to centralize the weight to a lower case body since at the time of setting a monopole antenna at the upper case body and a battery and the RF circuit at the lower case body, it is necessary to arrange an RF feeder between the both case bodies, and to hold the potentials of the both case bodies the same.

SOLUTION: This antenna device is provided with a radiating element set at one of a plurality of ground conductors, a linear conductor handle constituted of at least one linear conductor connected to the two of those ground conductors, and a high frequency interrupting means for interrupting the respective linear conductors in a high frequency.

LEGAL STATUS

[Date of request for examination] 07.04.2003
 [Date of sending the examiner's decision of rejection]
 [Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
 [Date of final disposal for application]
 [Patent number]
 [Date of registration]
 [Number of appeal against examiner's decision]

of rejection]
